## STRENGTHENING NATIONAL GUARD READINESS FOR HOMELAND RESPONSE

PRATUS provides the Guard tools to optimize force readiness exercises and accelerate the military decision-making process for supporting disaster response, special security events, civil unrest, or homeland defense. PRATUS features AI enabled tools to support mission analysis, course of action development, and operational execution of missions during training events or real-world responses. Approved for secure deployment in government cloud, PRATUS with Microsoft Teams provides a scalable platform to coordinate exercises and synchronize support across the 54 by facilitating EMAC to leverage total force readiness.

OUR MISSION

Save lives, protect the environment, and build resilient communities through our decision-support technologies.

OUR SOLUTION

PRATUS enhances decision-making with an integrated platform guided by the OODA loop framework, improving visibility, risk assessment, operational coordination, and incident management for unified response operations and exercise training.

KEY FEATURES

- The **Microsoft Teams** integration accelerates incident training and response within **Microsoft 365**, including **SharePoint**, simplifying communication and document management through One Pane of Glass®
- The **Incident Management Workspace** uses patented technology for impact-based risk assessment of critical infrastructure.
- The **Exercise Management Workspace** allows planners and teams to collaboratively plan, execute, and analyze emergency response exercises, improving exercise value.
- Leverage **PlanAI** for decision-making, generating objectives, actions, and resources using context from **DisasterGPT™ AutoSITREPs**, which provide situational updates within minutes.

INCIDENT MANAGEMENT

- Observe threats and hazards affecting event operations within your assigned areas of responsibility (AOR).
- Manage incident action planning and ICS forms in PRATUS, and automatically share them through One Pane of Glass® in Microsoft Teams for secure information exchange.
- Evaluate weather risks with tools like power outage prediction and assess weather impacts on operations.

DISASTERGPT™

- Orient to AOR threats with DisasterGPT™ AutoSITREPs for real-time threat snapshots.
- Use PlanAI to generate recommended objectives, actions, and resources based on AutoSITREPs data.
- Leverage AI for exercise planning with insights from historical responses and lessons learned.

EXERCISE MANAGEMENT

- Centralizes readiness exercise planning and reporting.
- Supports collaborative decision-making from planning to after-action reports.
- Provides continuous feedback to enhance response and training.
- Optimizes planning with customizable templates for meetings, participants, objectives, and MSEL injects.

TEAMS INTEGRATION

- Integrated with Teams-SharePoint for secure collaboration within the Microsoft 365 ecosystem.
- Ensure multi-agency coordination through Microsoft Teams and integrated third-party solutions.
- Auto-sync rosters and invite external stakeholders for seamless communication.
- Enhance situational awareness with PRATUS by receiving alerts on event statuses and actions through our patented solution.
